

Appendix B

WHAT TOXIC SUBSTANCES ARE SUBJECT TO TURA REPORTING?

All of the substances listed under Section 313 of EPCRA, and all of the substances that are on the federal Superfund (CERCLA) list of chemicals are reportable under TURA, except for those chemicals that have been delisted by the Administrative Council on Toxics Use Reduction. The list of TURA chemicals subject to reporting for reports due July 1, 2002 is located at the end of this Appendix. (The column entitled "ADD" refers to the year in which the chemical was added to the TURA list.) They include:

- EPCRA 313 and CERCLA chemicals and chemical categories sorted by chemical name
- EPCRA 313 and CERCLA chemicals and chemical categories sorted by CAS number

The following chemicals have been delisted from TURA (but in certain cases are reportable under EPCRA):

| Reporting Year/Chemical Delisted | Reason/Note |
|--|---|
| 1994 | |
| Barium Sulfate | EPCRA delisting and not CERCLA reportable |
| All copper phthalocyanine compounds that are substituted with only hydrogen and/or chlorine and/or bromine (delisted from the copper compounds category) | EPCRA delisting and not CERCLA reportable |
| High molecular weight glycol ethers | EPCRA delisting and not CERCLA reportable |
| 1995 | |
| Certain Metal Alloys (refer to Appendix F) | TURA Administrative Council delisting |
| Chromium (III) Oxide from chromium compounds category | TURA Administrative Council delisting |
| Ammonium Sulfate Solution (CAS#7783-20-2) | EPCRA delisting and not CERCLA reportable |
| Ammonium Nitrate Solution (CAS#6484-52-2) | EPCRA delisting and not CERCLA reportable |
| 1996 | |
| Hydroquinone (except for the manufacture of the chemical) | TURA Administrative Council delisting |
| Acetic Acid at concentrations of 12% or less | TURA Administrative Council delisting |
| Di-(2-ethylhexyl)Dipalmitate (DEHA) (CAS#103-23-1) | EPCRA delisting and not CERCLA reportable |
| 1997 | |

| | |
|---|---|
| Zinc Oxide from zinc compounds category | TURA Administrative Council delisting |
| Radionuclides | TURA Administrative Council delisting |
| 2-bromo-2-nitropropane (Bronopol) (CAS#52-51-7) | EPCRA delisting and not CERCLA reportable |
| 2, 6 dimethylphenol (CAS# 576-26-1) | EPCRA delisting and not CERCLA reportable |
| Carbamate waste category | CERCLA delisting and not EPCRA reportable |
| 1998 | |
| Silver-Copper Alloy | TURA Administrative Council delisting |
| 1999 | |
| Pure Copper and Pure Silver | TURA Administrative Council delisting |
| Caprolactum | CERCLA delisting and not EPCRA reportable |
| 2000 | |
| Zinc Stearate from zinc compounds category | TURA Administrative Council delisting |

1. Difference Between TRI and TURA Reporting of Hydrochloric Acid and Sulfuric Acid

- A qualifier was added to **hydrochloric acid (CAS No. 7647-01-0)** on the EPCRA list that relieves reporting for non-aerosol forms, effective reporting year 1996. A similar qualifier was added for **sulfuric acid (CAS No. 7664-93-9)** effective reporting year 1995. Reporting only is required for acid aerosols including mists, gas, vapors, fog, and other airborne forms of any particle size. **This qualifier is only applicable to EPCRA Form R submissions.**
- Since this chemical also is on the CERCLA list, **all forms (both aerosol and non-aerosol) are reportable under TURA**. A “State-Only” Form R must be submitted with the Form S for these acids, as well as the Form R submitted to EPA for only acid aerosols.
- For additional assistance on calculating and reporting sulfuric acid, please refer to the following EPA document: [Sulfuric Acid: EPA-745-R-97-007 \(11/97\) Guidance for Reporting Sulfuric Acid](#) (acid aerosols including mists, vapors, gas, fog and other forms of any particle size). This document is available from the EPA EPCRA Hotline 1-800-535-0202 and can be downloaded off the EPA TRI home page at http://www.epa.gov/tri/guide_docs/1998/sulfuric.pdf.

2. Rules For Reporting Certain Chemical Categories

Rules for Reporting Water Dissociable Nitrate Compounds Category

The 1996 EPA TRI guidance document, "List of Toxic Chemicals within the Water Dissociable Nitrate Compounds Category and Guidance for Reporting" (EPA 745-R-96-004), provides a detailed description of how to report this chemical category. The following general overview is from the guidance document:

"Chemicals within the nitrate compounds category are only reportable when in aqueous solution. All water dissociable nitrate compounds are included in the nitrate compounds category, including ammonium nitrate. Specifically listed section 313 chemicals *are not* included in threshold determinations for chemical categories such as the water dissociable nitrate compounds category. Specifically listed toxic chemicals are subject to their own individual threshold determinations. As of December 1, 1994, ammonium nitrate (solution) is not an individually listed chemical on the EPCRA section 313 list. However, ammonium nitrate is still subject to reporting under the nitrate compounds category. In addition, the aqueous ammonia from the dissociation of ammonium nitrate when in aqueous solution is subject to reporting under the ammonia listing."

The following is an example from the TRI guidance document:

✓ Example

In a calendar year, a facility manufactures as byproducts, 20,000 pounds of sodium nitrate and 10,000 pounds of calcium nitrate, both in aqueous solutions, and releases these solutions to wastewater streams. The total quantity of nitrate compounds manufactured by the facility is the sum of the two chemicals, or 30,000 pounds, which exceeds the manufacturing threshold quantity of 25,000 pounds. The facility therefore is required to report for the nitrate compounds category.

There are three diisocyanates that are reported individually under EPCRA, and not as the diisocyanate chemical category:

- Toluene-2,4-diisocyanate (584-84-9)
- Toluene-2,6-diisocyanate (91-08-7)
- Toluene diisocyanate (mixed isomers) (26471-62-5)

Rules for Reporting Glycol Ethers

There are separate categories for glycol ethers defined under EPCRA and CERCLA.

(Please refer to the TRI guidance document, "List of Toxic Chemicals within the Glycol Ethers Category and Guidance for Reporting," EPA 745-R-95-006.)

Reporting Guidance

EPCRA: Glycol Ethers are reportable as the glycol ethers category, N230. The

specific chemical formula which defines the EPCRA glycol ethers category is as follows:

where

- n = 1, 2, or 3;
R = Alkyl C7 or less, or phenyl or alkyl substituted phenyl;
R' = H or alkyl C7 or less, or

OR' consisting of a carboxylic acid ester, sulfate, phosphate, nitrate, or sulfonate.

Reporting Guidance

CERCLA: Glycol Ethers are reportable under CERLA as defined by the following chemical formula:

Includes mono and di-ethers of ethylene glycol, diethylene glycol, and triethylene glycol R-(OCH₂CH₂)_n-OR' where:

-n= 1, 2, or 3.

-R= alkyl or aryl groups.

-R'= R, H, or groups which, when removed, yield glycol ethers with the structure: R-(OCH₂CH₂)_n-OH. Polymers are excluded from the glycol category.

Any glycol ether that meets the CERCLA definition only is reportable if it is specifically named on the TURA list. If a glycol ether meets both the EPCRA and the CERCLA definitions, it is reportable under the EPCRA category (N230).

Rules For Reporting Specifically Listed Chemicals vs. Chemical Categories

Rules for Reporting the Use of Ammonia and Ammonium Hydroxide under TURA

To further clarify the reporting of ammonia and ammonium hydroxide under TURA, DEP recommends that reporting be consistent with EPCRA. Thus, there will not be a “state only” Form R required for ammonium hydroxide, and TURA filers should not file a Form S for ammonium hydroxide (CAS# 1336-21-6). Only one fee will be required to the state for the reporting of ammonia as ammonium hydroxide. DEP interprets ammonium hydroxide to be equivalent to aqueous ammonia (as does EPCRA), and 10% of aqueous ammonia (CAS# 7664-41-7) is reportable under TURA, effective reporting year 2000. Please refer to the EPCRA Section 313 Guidance for Reporting Aqueous Ammonia, Revised December 2000, EPA 745-R-00-005.

The following is quoted from #451, EPCRA Section 313 Questions and Answers, December 1998, EPA 745-B-98-004:

“ . . . The chemical ammonium hydroxide (NH_4OH) is a misnomer. It is a common name used to describe a solution of ammonia in water (i.e., aqueous ammonia), typically a concentrated solution of 28 to 30 percent ammonia. EPA has consistently responded to questions regarding the reportability of these purported ammonium hydroxide solutions under the EPCRA Section 313 ammonia listing by stating that these are 28 to 30 percent solutions of ammonia in water and that the solutions are reportable under EPCRA Section 313 ammonia listing. For a more detailed discussion, see page 34175 of the Federal Register final rule of June 30, 1995 (60 FR 34172).

Facilities should use the percent total ammonia specified on the label of ammonium hydroxide solutions they purchase to determine the total ammonia content in these solutions. Ammonium hydroxide has the chemical formula NH_4OH ; however, as mentioned above, strong evidence indicates that the species NH_4OH does not exist. Bottles of concentrated aqueous ammonia purchased from chemical supply companies are almost always labeled ammonium hydroxide. These solutions primarily consist of molecules of NH_3 dissolved in water (along with small amounts of ionized ammonia) . . . ”

Please note that different chemical suppliers will reference the % of ammonia in different ways. Therefore, it is recommended that facilities contact their chemical suppliers to specify the amount of ammonia per gallon. This question could be specified in “percent by weight per gallon” or in “number of pounds per gallon” of solution, for example.

✓ Examples

Example 1:

Facility otherwise uses 1,000,000 pounds of 30% solution by weight of ammonium hydroxide (30% ammonia by weight).

$$1,000,000 \text{ pounds} \times 0.30 = 300,000 \text{ pounds of ammonia}$$

Only 10% of ammonia is reportable on Form R per EPA Guidance for Reporting Aqueous Ammonia

$$300,000 \times 0.10 = 30,000 \text{ pounds of ammonia}$$

This facility would complete one Form S and one Form R for 30,000 pounds of reportable ammonia (see EPCRA Guidance for Reporting Aqueous Ammonia).

✓ Examples

Example 2:

| |
|--|
| <p style="margin: 0;">54,231 gallons of aqueous ammonia (19.0%)</p> <p style="margin: 0;">54,231 gallons x 8.34 pounds/gallon x 0.935 specific gravity</p> <p style="margin: 0; text-align: center;">= 422,888 pounds aqueous ammonia x 19.0%</p> <p style="margin: 0;">80,349 pounds ammonia x 10% reportable ammonia = 8,035 pounds ammonia</p> <p style="margin: 0; text-align: center;">This facility does not meet TURA or TRI reporting thresholds.</p> |

The table below summarizes how to report chemicals that are specifically listed and/or listed as chemical categories. Descriptions of specific reporting requirements for each row follow the table.

| Row No. | EPCRA Specific Chemical | EPCRA Category | CERCLA Specific Chemical | CERCLA Category | Report as: |
|---------|-------------------------|----------------|--------------------------|-----------------|--------------------------|
| 1 | yes | yes | | | EPCRA Specific Chemical |
| 2 | yes | | | yes | EPCRA Specific Chemical |
| 3 | | yes | yes | | EPCRA Category |
| 4 | | | yes | yes | CERCLA Specific Chemical |
| 5 | | yes | | | EPCRA Category |
| 6 | | yes | | yes | EPCRA Category |
| 7 | | | | yes | Do Not Report * |

Rows 1 & 2:

If a specific chemical is named on EPCRA and it also is reportable under either an EPCRA or CERCLA listed category, it should be reported **only as a specific EPCRA chemical, not under the category.**

✓ Example

Hydrogen Cyanide: EPCRA category (Cyanide Compounds), EPCRA specifically listed
Report as: EPCRA specific chemical (Hydrogen Cyanide)

1,2,4 Trichlorobenzene: EPCRA specifically listed, CERCLA category (Chlorinated Benzenes)

Report as: EPCRA specific chemical (1,2,4 Trichlorobenzene)

Row 3:

When a specifically listed CERCLA chemical falls within an EPCRA listed category, it should be reported **only under the EPCRA chemical category and not under the specific chemical name.**

✓ Example

Calcium Cyanide: EPCRA category (Cyanide Compounds), CERCLA specifically listed

Report as: EPCRA category (Cyanide Compounds)

Row 4:

When a specifically listed CERCLA chemical falls within a CERCLA listed category, it should be reported **only as the specific CERCLA chemical.**

✓ Example

- Benzenesulfonyl Chloride: CERCLA specifically listed, CERCLA category (Chlorinated Benzenes)

Report as: CERCLA specific chemical (Benzenesulfonyl Chloride)

Row 5:

Chemicals falling under an EPCRA chemical category or categories which are not specifically listed under EPCRA or CERCLA, should be reported under the EPCRA chemical category or categories.

✓ Example: Lead Chromate, Reporting Two Competing Compound Classes

If you are reporting lead chromate you need to report under the lead compounds and chromium compounds categories

- **Report the SAME weight for Lead Compounds and Chromium Compounds use (total weight of the compound) on EACH Form S.**
- For Byproduct tracking, report ONLY the weight of the reportable constituent for each category.

- In Optional Section 2 of each Form S, enter the weight of the chemical in d.
- Even though you will file 2 separate Form Ss for Lead Compounds and Chromium Compounds, you will **pay only ONE TURA fee for both chemicals.** (Example Form Ss are shown on the next page.)

Row 6:

Chemicals falling under an EPCRA chemical category and a CERCLA chemical category which are not specifically listed under EPCRA or CERCLA should be reported under the EPCRA chemical category.

Row 7:

Chemicals that only are listed as a CERCLA category are not reportable.

CERCLA Category only: phthalate esters, polynuclear aromatic hydrocarbons, polycyclic organic matter, glycol ethers, chlorinated phenols, etc. should NOT be reported unless they are specifically named.

✓ Form S Example:

Section 1: Facility-Wide Use of Listed Chemical

| | |
|----------|---|
| 1026 | Lead Compounds |
| a. CAS # | b. Chemical Name (Dioxin will be assumed to be grams, decimal points may be used) |

Facility-wide use of chemical identified in a. Enter the total amount (in POUNDS, except for dioxin) for each applicable category. **NOTE:** 'Generated as byproduct' (item f.) generally means all waste containing the listed chemical before the waste is treated or recycled. Please refer to the reporting instructions before completing this section.

| |
|-----------------------------|
| c. Manufactured |
| e. Otherwise used |
| 66,000 |
| g. Shipped in or as product |

| |
|---------------------------|
| d. Processed |
| 650 |
| f. Generated as Byproduct |

Section 2: Optional Questions

When the amounts reported in c, d and e in Section 1 are added together, the sum will in many cases equal the sum of f and g. In other words, lines c,d and e will often form a "materials balance." If lines c,d and e are not in approximate balance, you may use this section to explain why. Indicate all the reasons that apply by entering the number of pounds on the appropriate line below (e.g., 4,000 Chemical was held in inventory).

| | |
|-----------------------------------|---|
| a. Chemical was recycled on site | b. Chemical was consumed or transformed |
| 300; 33,000 | |
| c. Chemical was held in inventory | d. Chemical is a compound |
| e. Other (explain below) | |

- f. Did anything non-routine occur at your facility during the reporting year which affected the data reported? Yes No If yes, please explain.

Summary of TURA Reportable Chemical Categories for Calendar Year 2002

TURA requires reporting on the chemical categories listed below. The individual chemicals included in each chemical category should always be reported in their parent chemical category (e.g., antimony compounds), and not as individual chemicals. Please note that this is not an exhaustive list of individual chemicals within the chemical categories.

| Chemical Category | CAS No. | Chemical Name |
|---|---|--|
| Antimony Compounds Includes any unique chemical substance that contains antimony as part of the chemical's infrastructure. Includes, but is not limited to: | 1309-64-4 7647-18-9 7783-56-4 7789-61-9 10025-91-9 28300-74-5 | Antimony Trioxide Antimony Pentachloride Antimony Trifluoride Antimony Tribromide Antimony Trichloride Antimony Potassium Tartrate |
| Arsenic Compounds Includes any unique chemical substance that contains arsenic as part of the chemical's infrastructure. Includes, but is not limited to: | 692-42-2 696-28-6 1303-28-2 1303-32-8 1303-33-9 1327-52-2 1327-53-3 7631-89-2 7645-25-2 7778-39-4 7778-44-1 7784-34-1 7784-40-9 7784-41-0 7784-46-5 10102-48-4 10124-50-2 52740-16-6 | Diethylarsine Dichlorophenylarsine Arsenic Pentoxyde Arsenic Disulfide Arsenic Trisulfide Arsenic Acid Arsenic Trioxide Sodium Arsenate Lead Arsenate Arsenic Acid Calcium Arsenate Arsenous Trichloride Lead Arsenate Potassium Arsenate Sodium Arsenite Lead Arsenate Potassium Arsenate Calcium Arsenate |
| Barium Compounds Includes any unique chemical substance that contains barium as part of the chemical's infrastructure. Does not include barium sulfate, CAS # 7727-43-7. Includes, but is not limited to: | 542-62-1 | Barium Cyanide |
| Beryllium Compounds Includes any unique chemical substance that contains | 7787-47-5 7787-49-7 7787-55-5 | Beryllium Chloride Beryllium Fluoride Beryllium Nitrate |

| | | |
|---|------------|-------------------|
| beryllium as part of the chemical's infrastructure. Includes, but is not limited to: | 13597-99-4 | Beryllium Nitrate |
|---|------------|-------------------|
